# T-Scan™ Software v10

What Your Digital Workflow Is Missing

NEW! 2018

The New Standard of Care in Occlusion

New! T-Scan™ v10 software comes stocked with enhancements to improve speed and usability, so you can capture bite information easily and efficiently.

Move Less, Groove More.
With T-Scan v10, stay chairside to create, record, and review patient scans using the handpiece buttons.

Biometric Blockbuster.
Integrating biometric data with T-Scan never looked better. A newly designed interface makes it easy to view EMG muscle function simultaneously with occlusal contacts.
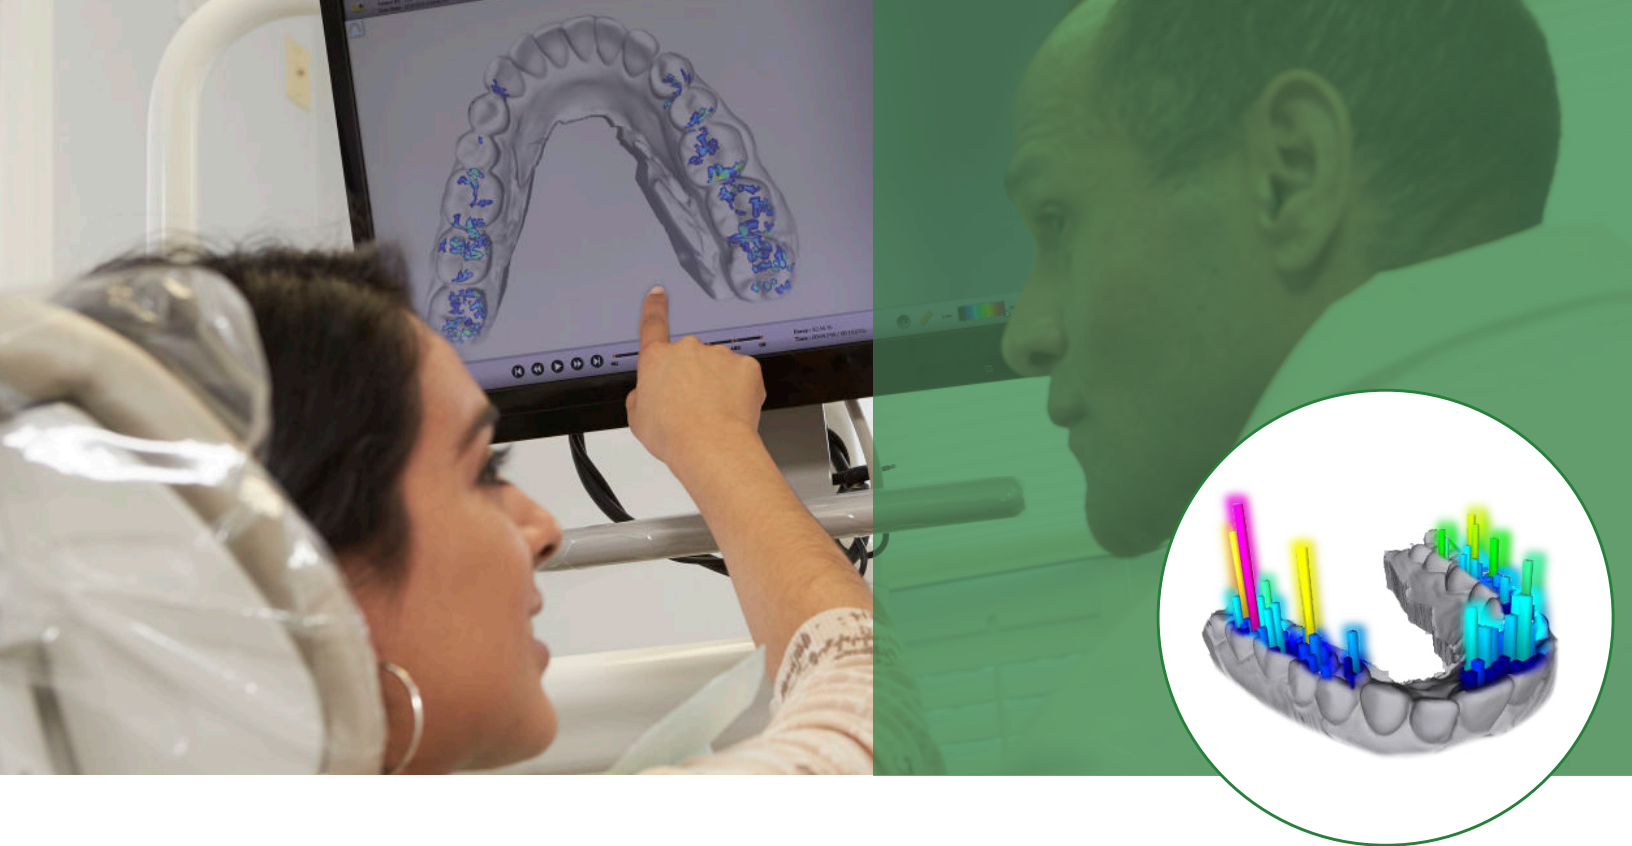

A New Age of Dentistry.
With new alignment features, adding measured forces to your digital impressions has never been easier.

Tekscan™

Take Control of Occlusion

SHOW. TELL. TAKE ACTION.

What your intraoral scanner isn't telling you...

While an intraoral scanner isn't required to use T-Scan, v10 allows you to import any open STL file so you can overlay the bite force data directly over a digital impression. This helps the dentist and patient see the functional impact of occlusal forces directly on the dentition. No simulations. No dimensional calculations. No guessing. Just a complete picture of the dynamic bite.

> **"T-Scan v10 Digital Occlusal Analysis will change your perspective and your perception of what dental occlusion actually is.**
